

## PRESS RELEASE

### **Warren M. Levin, MD, FAAFP, FACN, FAAEM Introduces Individualized Breakthrough Genomic Testing---The Genovations™ Profile**

**Vienna, VA**—Warren M. Levin, MD, located in Vienna, VA, introduces a truly personalized healthcare approach which allows Dr. Levin to evaluate each patient's unique genetic predisposition, then develop and implement a carefully targeted, customized health care plan even before pre-disease imbalances become apparent.

Recent informational releases by the CDC (US Center for Disease Control) concur with Dr. Levin's long time philosophy that "virtually all human diseases result from the *interaction* of genetic susceptibility factors and modifiable environmental factors, broadly defined to include infections, chemical, physical, nutritional, and behavioral factors." (CDC, August, 2000) The days of "one-size-fits-all" medicine have come to an end, says Dr. Levin.

The Genovations™ profile provides a previously unseen glimpse into a person's potential health future, empowering the physician to modify the expression of disease years before a condition begins to develop. Included are:

- The ability to gain earlier advanced warning of disease susceptibility in each patient
- Identify hidden gene mutations that may promote chronic disease
- Identify key target areas on which to focus follow-up
- Monitor therapeutic effectiveness of intervention strategies

Given the knowledge that this testing will provide, Dr. Levin looks forward to earlier preventative interventions. He also anticipates even better outcomes due to a more effective treatment strategy, based on the information obtained from this exciting new technology. Patients with a family history of certain diseases can learn if they have inherited a genetic predisposition for this condition and, if so, what they can specifically do to 'BREAK THE PATTERN' and better prevent it.

For further information you may reach Dr. Levin's Vienna, VA office at 703-255-1303.
